INTRODUCTION

The National Cancer Institute José Alencar Gomes da Silva (INCA), adopts a model of participatory management and shared allowing his actions assisted in the formation of networks of technical and scientific knowledge where it seeks to expand the availability of a wider range of information, exercising well a health policy guided the principles of citizenship, whose purpose and priority health equity in the context of the Unified Health System (SUS). Is developing the Virtual Health Library Prevention and Control of Cancer.

OBJECTIVE

To present the Virtual Health Library Prevention and Control of Cancer to use of scientific information for health decision making.

METHODS

With the Virtual Health Library, aims to advance the expansion of information services, it is aligned to an open policy of democratization of knowledge associated with national institutions that will operate through an Advisory Committee, an Executive Secretariat and Executive Committee, organizational information management. Structured by thematic areas the Virtual Health Library is composed of information sources to meet both the researcher and the general public, it operates with search strategies that enable articulate all databases because it incorporates the use of technologies associated with the construction information systems that favor the search for specific topics. In their interface, are spread the most relevant topics in the subject of cancer prevention and control: Prevention and Risk Factors, Types of Cancer, Women's Health, Treatment, Palliative Care and Epidemiology.

RESULTS

With the proposed construction of bvs it idealizes an information architecture which proposes the interaction of all types of users, thus allowing to expand their field studies to develop an environment of education with focus on the user. With this project becomes possible to expand the services and products provided to the population

CONCLUSION

With research strategies applied to these topics, provides results with print and digital resources available in full text and references. With this initiative, the INCA hopes to contribute to the safeguarding of knowledge construction and disseminating research results on current health, a factor integrating public policy in various networks in order to minimize social problems and having thus the health needs of the population.
