Ministério da Saúde Secretaria de Gestão Participativa

Database for
Social
Control in SUS
Acompaniment
of the
Advice of Health

Product of partnership between the Secretaria de Gestão Participativa do Ministério da Saúde – (SGP/MS) and the Escola Nacional de Saúde Pública – (ENSP/Fiocruz), the Project “Accompaniment of the Advice of Health” demonstrates that the joint work - management and research - produces resulted positive and pro-positive that contribute, effectively to:

- Democratization of the public power; the empowerment of the civil society;
- Improvement of the conditions of life for the population.

Take care the social demands, increment of the social control, empowerment the paper of the Advice of Health and support the qualification of the representation and the participation of the “users” in these advice, was elaborated a methodology for accompaniment, who respecting and contemplating the local diversities, can:

- Give visibility to the current situation of the Advice;
- Support the (re)structure and the qualification of its resources (physicists and human beings);
- Monitor and evaluate, in propositive and not punitive way, its performance; and
- Produce subsidies for action definition, projects and politics.

Having its official beginning in 15 of December of 2003, this Project is divided in 2 stages with the following objectives:

1.ª STAGE:

Objectives:

(a) Elaborate a research instrument that is applied in the survey of quantitative and qualitative information that propitiate, the construction of a database on the Advice of Health in Brazil and

(b) Construct one cadastre with the register in the cities councils of health in Brazil, in order to raise the necessary data for the application of the research instrument (address, telephone and, when possible, email and person of contact).

2.ª STAGE:

Objectives:

(a) Validate the instrument of research elaborated in the first stage;

(b) Apply, in the Advice of Health in Brazil, the validated instrument of research;

(c) Monitor the application of this instrument;

(d) Elaborate, from the raised information by instrument, the profile of the Advice of Health in Brazil; and

(e) Construct a database whose information subsidize the creation of a “System of Accompaniment” of the Advice of Health in Brazil.
